

1. Please create an entity to handle the form submissions from external web site:

Table name: tt-0413

Fields:

Label	Field name	Field type	Required
id	id	int auto-increment	Yes
First name	first_name*	varchar(100)	Yes
Last name	last_name*	varchar(100)	Yes
Email	email*	varchar(255)	Yes
Phone	phone*	varchar(100)	Yes
Company	company*	varchar(100)	Yes
Job	job*	varchar(100)	Yes
Country	country*	varchar(100)	Yes
Created at	created_at	Datetime	Yes

* -- list of fields from external web site

2. Please create an endpoint for entity tt-0413 to allow form submissions to reach this table.

Endpoint: POST /tt/0413

HTTP Responses:

- If the submission is successful return 201 Created
- If all the required fields are not populated return 400 Bad request

3. Please set up an interface to view the list of submissions (access should be protected by login/password) with 'Download CSV' button to download file with submissions
